

Hints And Tips

MiWatchKleaner

This is a new helper I have created for Windows/Linux/Mac users to be able to remove all the bloatwear from the watch and install the most used Google and Other apps needed to make our watch a bit more usable outside of China.

Features

- **USB** or **Wifi** connection to your watch
- Remove all Xiaomi apps from your watch
- Enable "Global" style UI
- Install compatible apps on your watch

To use this app you need to download the latest release from the link at the bottom of this post -

Notes for using

- Make sure PC and Watch are on same wifi (If using wifi, DO NOT connected your watch via USB)
- Ensure not other "ADB" devices are connected to your pc
- Get Watch IP address - Settings > Connectivity > Wifi > Click on your wifi connection
- Enable Debug Over Wifi - Settings > Developer Options > Debug Over Wi-Fi
- First time connecting to your watch, you will need to accept the connection, select "Always allow from this deive"

Windows Users

- Extract and run miwatchkleaner2-win-x86.exe

Linux & Mac users

- After extracting the archive please run the following via terminal in the extracted folder
- `chmod 0777 adb miwatchkleaner2-*`
- You shuld then have no issues running the cleaner

Hints And Tips

Please download the latest release from [here](#)
